Summary

Final-year Computing Systems student (on track for a First) who builds real apps for real businesses, using AI coding tools for the code and owning the specs, design decisions and testing. My ordering app cut a restaurant's nightly ordering from 15–20 minutes to about 5. Available full-time from June 2027.

Experience

Stock & Supplier Ordering Web App | Client: Amigos Burgers & Shakes, Harrow
Software Developer (Client Project) | Sep 2026–Present

- Mapped a manual ordering process with the restaurant team, then built a mobile-first web app that turns stock counts into orders for 8 suppliers. In live use at the Harrow branch.
- Cut ordering from 15–20 minutes to about 5; demoed to managers and changed the app from their feedback.
- Python (FastAPI, SQLAlchemy) on PostgreSQL, deployed on Vercel, with a pytest suite.
- Built with AI coding tools from my own specs; I reviewed every change and ran a security audit before release.
- Added manager approval after live use showed a cover shift could double an order.

Recipe & Training Web App | Client: Another Brother group, London
Software Developer (Client Project, agreed) | Starting Dec 2026

- Agreed with the owner to build a web app for staff recipes and training videos across 8 London branches.

Another Brother Cafe, London
Head of Kitchen Training (Part-Time) | Nov 2024–Present

- Promoted from Kitchen Assistant to Senior Supervisor, then Head of Kitchen Training for all branches.

Education

Ulster University, London
BSc (Hons) Computing Systems | Sep 2024–Jun 2027
Year 1: 79% (Dean's List) | Year 2: 77%

- Modules: Programming in Practice, Server-Side Development, Cloud Native Development, Databases.

Punjab College, Gujranwala | ICS (HSSC), Computer Science, A+ | 2021–2023

Projects

Local AI Gmail Sorter
Python | SQLite | Gmail API

- Python app that classifies my Gmail with rules first and a local LLM (Ollama) only when needed, so email stays on my laptop.

Repository: github.com/GhulamMustafa-MS/local-gmail-ai-sorter

Job Application Tracker
Java | MySQL | JDBC | SQL

- Java (OOP) command-line app with a DAO layer on a normalised MySQL schema, using JDBC for CRUD and analytical SQL queries.

Repository: github.com/GhulamMustafa-MS/job-application-tracker

Skills

Programming: Python, SQL, Java (OOP basics), JavaScript
Backend & Data: FastAPI, SQLAlchemy, PostgreSQL, SQLite, MySQL, REST APIs, Gmail API (OAuth)
Cloud & Tools: AWS (studying for SAA-C03), Vercel, Git, GitHub, pytest, command line
AI Tools: AI coding assistants (Claude Code), Ollama (local LLMs); studying ML basics (embeddings, RAG)
Languages: English (fluent), Urdu (native), Punjabi (native)
