Summary

Final-year BSc (Hons) Computing Systems student focused on backend software development, with practical experience building Java, Python and SQL applications using relational databases and APIs. Strong foundation in object-oriented programming, database design and debugging, with AWS Solutions Architect Associate preparation in progress. Seeking software engineering, backend, cloud or technical opportunities to gain commercial development experience.

Education

Ulster University, London
BSc (Hons) Computing Systems | 2024–2027

- Entering final year in September 2026 with strong academic performance and Dean's List recognition.
- Relevant study includes programming, database systems, software development and web technologies.

AWS Solutions Architect Associate (SAA-C03) — Exam Preparation in Progress

- Completing structured preparation covering AWS architecture, compute, storage, databases, networking, security, monitoring and high availability.

Projects

Local AI Gmail Sorter
Python | SQLite | Gmail API

- Built an automated email-classification system using rules-based processing with an AI fallback for ambiguous messages.
- Integrated Gmail API actions and SQLite tracking to automate workflows while preventing duplicate processing.
- Added validation, error handling and safer batch-processing logic to improve reliability.

Repository: github.com/GhulamMustafa-MS/local-gmail-ai-sorter

Job Application Tracker
Java | MySQL | JDBC | SQL

- Developed a modular Java application for managing and analysing job applications using a normalised MySQL database.
- Implemented full CRUD functionality using JDBC, including creating, updating, searching and deleting records.
- Added input validation and analytical SQL queries to evaluate application performance and trends.

Repository: github.com/GhulamMustafa-MS/job-application-tracker

Experience

Another Brother, London
Kitchen Manager / Senior Supervisor (Part-Time) | 2024–Present

- Progressed from Kitchen Assistant to senior operational and supervisory responsibilities while studying full-time.
- Coordinate daily workflows, prioritise time-sensitive issues and help maintain reliable operations in a fast-paced environment.
- Train colleagues, communicate procedures clearly and resolve day-to-day operational problems independently.

Skills

Programming: Java, Python, SQL, C
Backend & Data: JDBC, MySQL, SQLite, CRUD, relational design, normalisation, APIs
Cloud & Tools: AWS (SAA-C03 preparation), Git, GitHub, VS Code, command line
Core: OOP, debugging, data validation, backend development | **Languages:** English, Urdu, Punjabi
