ghulam-mustafa-ms.vercel.app · github.com/GhulamMustafa-MS · linkedin.com/in/ghulam-mustafa-41807b281

Final-year Computing Systems student (on track for a First) who builds software for the people behind the counter. I have two apps in real use by paying businesses: a stock and ordering app for a London restaurant and a food-safety exam app in 11 languages. AI coding tools write a lot of my code. I own the requirements, design decisions, testing and security checks. Available full-time from June 2027.

EXPERIENCE

Amigos Orders · Stock and supplier ordering web app

Sep 2026 to present

Client: Amigos Burgers & Shakes, Harrow · Python, FastAPI, SQLAlchemy, PostgreSQL (Neon), Vercel, pytest

- Mapped a manual WhatsApp ordering process with the restaurant team, then built a mobile-first app that turns staff stock counts into orders for **8 suppliers**, each with its own order days and cut-off times. In live use at the Harrow branch, with more branches planned.
- Cut end-of-night ordering from **15-20 minutes to about 5**. The app suggests order quantities from past orders and shows them beside the staff amounts.
- Added **manager approval** after a cover shift nearly doubled an order: team lists go to a manager, who approves and orders in one tap.
- Built food-safety records (opening and closing checks, temperatures, inspection PDF and Excel exports) and phone push reminders for supplier cut-offs.
- Ran a security audit before release: server-side role checks on every page, CSRF protection, hashed PINs, login lockout and a strict Content Security Policy. **210 automated tests** run on GitHub Actions for every change.

Kartak · Food-safety exam practice app

Oct 2026 to present

Client: a Saudi restaurant · JavaScript, Node.js serverless, PostgreSQL (Neon), Vercel, Playwright

- Phone app that prepares food workers in Saudi Arabia for their health certificate exam, paid for by a Saudi restaurant for its staff. Works in **11 languages**, including right-to-left Arabic and Urdu, and **offline** after the first visit.
- Separate seller app issues one-phone access codes and shows a results dashboard of who is ready for the exam.
- Parameterised SQL, hashed admin password and secrets kept out of the code. **154 automated checks** (API tests plus phone-sized browser tests in every language).

Head of Kitchen Training · Another Brother Cafe, London (part-time)

Nov 2024 to present

- Promoted from Kitchen Assistant to Senior Supervisor, then Head of Kitchen Training. I train managers and new staff across the group's branches.

EDUCATION

BSc (Hons) Computing Systems · Ulster University, London

Sep 2024 to Jun 2027

Year 1: 79% (Dean's List) · Year 2: 77% · BCS student member

- **Final-year project:** Predicting and Preventing Perishable Food Waste in Hospitality with Machine Learning, in partnership with industry partner **growyze**. A system that predicts which perishable stock is likely to go to waste and suggests what to order and promote.
- Modules include Server-Side Development, Full-Stack Development, Cloud Native Development, Systems Security, Databases and Data Analytics.

ICS (HSSC), Computer Science · Punjab College, Gujranwala · A+

2021 to 2023

SKILLS

Languages	Python, SQL, JavaScript, Java (basics)
Backend & data	FastAPI, SQLAlchemy, REST APIs, PostgreSQL, SQLite, MySQL, serverless functions
Testing & delivery	pytest, Playwright, GitHub Actions, Git, GitHub, Vercel, Neon
Cloud	AWS (studying for Solutions Architect Associate), Azure (coursework)
AI tools	Claude Code and other AI coding assistants, Ollama (local LLMs)
Spoken	English (fluent), Urdu and Punjabi (native)
